Commercial Shot Blasting Prep Checklist

A shot blasting project runs fastest, and costs least, when the site and the project details are ready before the crew arrives. Use this checklist when you are planning a new coating, overlay, restripe or line removal in a warehouse, plant or shop.

Before you request a proposal

- [ ] **What is on the floor now:** bare concrete, sealer, paint, epoxy, old lines, adhesive or tile
- [ ] **What goes on next:** the coating, overlay or striping, and its product data sheet
- [ ] **The profile required:** the CSP number on that data sheet
- [ ] **Size:** approximate square footage, or linear feet for line removal
- [ ] **Photos:** wide shots of the area plus close-ups of the worst spots
- [ ] **Schedule:** your deadline, the next trade's start date and the hours the area is available

Preparing the site

- [ ] Floor cleared of racks, pallets, equipment and debris in the work area
- [ ] No other trades working in or above the work area during blasting
- [ ] Trailer access to a door near the work area
- [ ] Building power near the work area confirmed; if none is available, BlastTex provides a generator
- [ ] Sensitive equipment and open product near the work area identified for the crew
- [ ] An asbestos test result before any old adhesive, mastic or tile is removed
- [ ] A site contact available to provide access, answer questions and complete the final walkthrough

What shot blasting does, and what it does not

Shot blasting can	Shot blasting cannot
Clean and profile concrete to a specified CSP for coatings	Remove oil that has penetrated deep into the slab
Remove old lines, paint, sealers and thin coatings	Remove every thick coating in one pass; some require extra passes or another method
Restore texture on smooth docks and ramps	Repair cracks, spalls or broken concrete
Work without water or acid, with HEPA dust collection	Guarantee slip resistance or code compliance

Faint shadows of old lines can remain after removal. Your coating installer makes the final call on whether the surface is ready.

Have BlastTex handle it

The Coating-Ready Floor package: from $2,500 within 50 miles of Hurst, TX, including mobilization, dust collection and cleanup. Larger floors are quoted by the square foot.

- Shot blasted to the specified CSP, with a test area when needed; edges ground
- Two walk-behind blasters plus a ride-on for large open floors
- Company-owned generator, HEPA dust collection and trailer
- Nights, weekends and phased work around your operation
- Time-Stamped Photo Report: before, during and after
- Free site walk within 50 miles of Hurst

Text floor photos and your spec to 817-600-8452.

General guidance only. Your coating manufacturer's instructions always take precedence.
